

Enercept Product Bulletin #3

Created: 4/13/16

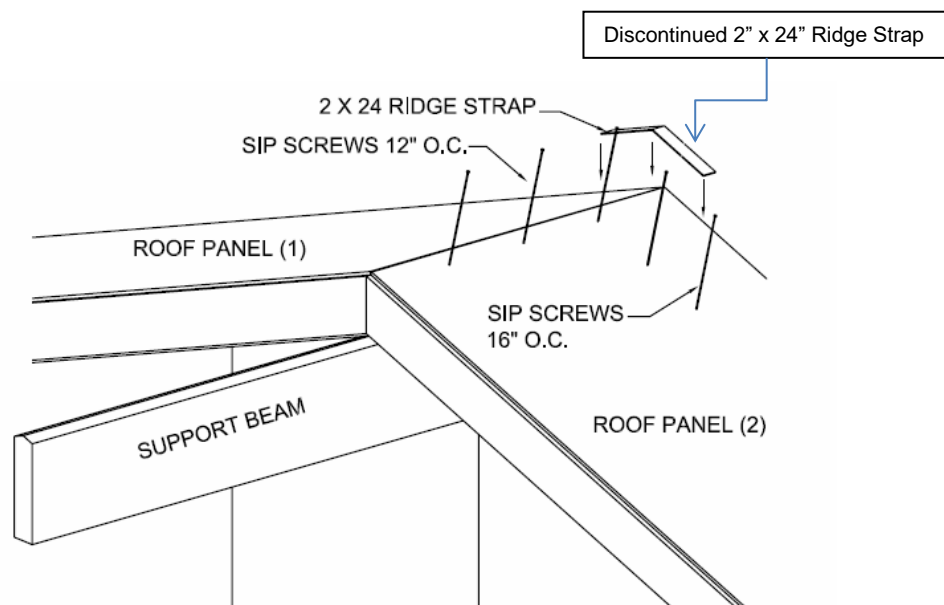

2" x 24" RIDGE STRAP (Discontinued):

Summary Description:

Enercept SIP construction guide has recommended the installation of 2" x 24" ridge straps in Section 8 – Structural Roof.

The 2" x 24" ridge straps have been discontinued and will not be provided as part of the Enercept SIP roof package. SIP screws/fasteners are provided and used to secure the panels into place.

Basis of Change:

Per Enercept code/listing reports, SIP screws are the approved fastener to secure panels to beams, purlins, and support walls. Therefore 2x24 ridge straps are no longer used for this purpose.

Cautionary Notes:

Please review Enercept final plans for your project and follow SIP screw installation instructions to assure proper roof panel attachment.
