

# Enercept Product Bulletin #7

Created: 8/8/17

## Sealant usage:

### Summary Description:

Enercept has switched from using quart caulk containers to 20oz sausage tubes for their sealants. This change also includes providing 20oz sausage gun(s). This link provides information regarding sausage gun usage - <https://www.youtube.com/watch?v=pznzE13PtI4>

Manus-Bond 20oz. Sausages

20oz. sausage gun applicator

### Basis of Change:

Although the sealant product has not changed, the container and applicator have changed. Sausage tubes and sausage gun applicators have been part of the SIP industry for many years. Enercept customers have had damage to caulk containers and have experienced tube “blow-outs” in the past. It’s believed that changing to sausage tubes and the use of a gun applicator will help alleviate this issue. In addition, less jobsite waste is created which is part of our overall goal.

Manus-Bond sealant has a non-skinning formula and it comes in boxes of 20 – 20oz sausage tubes.

Enercept will provide (1) sausage gun applicator when the amount of sausage tubes is 40 or less. (2) gun applicators will be provided for projects that require more than 40 sausage tubes.

### Cautionary Notes:

#### Conditions for Safe Storage:

Store and handle in accordance with all current regulations and standards. Store in a cool dry place. Store in a well-ventilated area. For maximum shelf-life, store at or below 90°F.
